- Frequency: 50/60 Hz,
- The Drager etCO2 is an advanced module designed to accurately monitor carbon dioxide (CO2) in the respiratory system of a patient undergoing mechanical ventilation. Integrated with Dräger masks, this module provides continuous and timely patient monitoring, enabling accurate assessment of lung function and early detection of respiratory complications,
- Specifications:
 - Continuous CO2 monitoring:
 - The CO2 module monitors carbon dioxide exhalation by monitoring the precise assessment of alveolar ventilation and lung function,
 - Precision CO2 sensor:
 - Equipped with a high-precision CO2 sensor, the module provides precise and reliable measurement of CO2 concentration, allowing early detection of respiratory abnormalities,
 - Configurable alarms:
 - The module is equipped with configurable alarms that alert physicians to abnormal CO2 concentrations, allowing quick intervention,
 - Real-time display:
 - CO2 levels are displayed at regular intervals on the breathing apparatus, providing continuous monitoring and immediate assessment of respiratory function,
 - Data storage:
 - The module records and stores CO2 data for further analysis and accurate documentation of patient ventilation,
- Advantages:
 - Continuous and precise monitoring of CO2 levels for accurate assessment of lung function,
 - Early detection of respiratory complications and rapid intervention in case of injury,
 - Increased patient safety with customizable alarms and immediate monitoring,
- Includes:
 - ZOLL CAPNOSTAT sensor,
